Background

- Palliative care is a philosophy and a unique set of interventions that aim to enhance quality of life at the end of life in order to provide a “good death” for people, and their family, when death is inevitable.

- Quality of life at the end of life is understood to be multidimensional and to consist of physical, emotional, social, spiritual and financial domains.

- Most long term care homes do not have a formalized palliative care program that address these needs.
Long-Term Care Homes and Dementia

- The need for LTC beds will increase tenfold with Canada’s aging population (Alzheimer Society, 2010)

- Currently, 65% or more of residents in Ontario’s LTC homes have dementia (Alzheimer Society Ontario, 2010)

- 67% of dementia-related deaths occur in nursing homes (Mitchell, et al., 2005)
Long-Term Care Homes and Palliative Care

- In Canada 39% of all deaths have been reported to occur in LTC facilities (Fisher et al., 2000)
- The majority of LTC homes in Canada lack formalized palliative care programs.
- LTC could be thought of as the hospices of the future, caring for older people with chronic conditions with a long trajectory to death, the most common being dementia. (Abbey et al., 2006)
When does Palliative Care Begin?

(CHPCA, 2002)
Challenges and Issues

- Lack of policy and dedicated funding related to palliative care in LTC.

- Insufficient training in LTC on palliative care and end stage dementia.

- Families and residents are not given opportunities to discuss and learn about their end of life options.

- Advance Care Planning focuses solely of medical interventions, ie DNR orders.

- People who could benefit from palliative care are not identified in a timely manner.
### Square of Care and Organization

#### Processes of Providing Care
- **Assessment:** History of issues, opportunities, associated expectations, needs, hopes, fears, examination - assessment scales, physical exam, laboratory, radiology, procedures.
- **Information-sharing:** Desires and readiness for information sharing, process for sharing information, translation, reactions to information, understanding desire for additional information.
- **Decision-making:** Capacity, goals of care, requests for withholding/withdrawing care, therapy with no potential for benefit, hastened death, issue prioritization, therapeutic priorities, options, treatment choices, consent, futile care scenarios, decision making, advance directives, conflict resolution, setting of care management plan, care management, address issues, opportunities, delivery of care, necessary care, discharge planning, emergencies.
- **Care Planning:** Care management, communication, coordination, support, consultation, setting of care management plan, family support, therapy delivery, referrals.
- **Care Delivery:** Understanding satisfaction, complex care, crisis, issues, questions.
- **Confirmation:** Governance, administration, leadership, board, management, organizational structure, accountability, planning, strategic planning, business planning, business development, operations, standards of practice, policies & procedures, data collection/documentation guidelines, resource acquisition & management, safety, security, emergency systems.
- **Quality Management:** Performance improvement, routine reviews, outcomes, resource utilization, risk management, compliance, satisfaction, needs, financial audit, accreditation, strategic & business plans, standards, policies & procedures, data collection/documentation guidelines, communications, marketing, communication & marketing strategies, materials, media.
Quality Palliative Care in Long-Term Care Homes (QPC-LTC)

- Improve the quality of life for residents in LTC
- Develop interprofessional palliative care programs
- Create partnerships between LTC homes, community organizations and researchers
- Create a toolkit for developing palliative care in LTC Homes that can be shared nationally
- Promote the role of the Personal Support Worker in palliative care
QPC-LTC Alliance Methods

- Comparative Case study design with four LTC Homes as study sites
- Quantitative and qualitative research methods: Surveys, Interviews, Focus Groups, Participant Observations, Document Reviews
- Participants: Residents, Family members, Physicians, PSWs, RNs, RPNs, Spiritual Care, Social Work, Recreation, Dietary, Housekeeping, Maintenance, Administration, Volunteers and Community Partners
QPC-LTC Alliance Methods

Participatory Action Research

- Rooted in Social Action theory

- Empowers participants to create change in their own situation

- Lakehead University is working in partnership with St. Joseph’s Care Group and the Municipality of Halton on developing formalized palliative care programs for LTC.
Research Timeline

- Year 1 – Environmental Scan in each home to create baseline understanding using CHPCA norms of practice (PC delivery, PC processes, LTC/PC policies, LTC resources).
- Year 2 – Create interprofessional PC teams and identify initial interventions based on evidence.
- Year 3 – Develop PC program with PSW and community partners. Ongoing initiation and evaluation of PC interventions (PDSA cycle).
- Year 5 – Evaluate change and sustainability of changes (repeat environmental scan). Create evidence based toolkit of successful interventions.
- Year 5 onwards – Promote change in policy, practice and education.
Participants and Data Collection

• Surveys
• All LTC home staff completed surveys
  – Sample sizes across 4 homes are approximately:
    • 205 PSWs
    • 69 Licensed Nurses
    • 79 Support Staff
    • 32 Administration
    • 39 Residents
    • 64 Family Members
FATCOD Survey (Frommelt Attitudes Toward the Care of Dying)

- 30-item scale designed to measure participants’ attitude toward providing care to dying people

- Has no subscales

- Each item is scored on a scale of 1 (strongly disagree) to 5 (strongly agree)

- 15 items are scored positively and 15 negatively (lower scores consistent with PC philosophy)
Findings of the FATCOD Survey

- Average scores across: 4.075
  - All four homes: 4.075
  - PSWs: 3.82
  - Licensed nurses: 4.21
  - Support Services: 3.89
  - Management: 4.16

- On average, staff demonstrated a positive attitude about providing care for dying residents
QiAS (Quality in Action Scale)

- 43-item scale designed to measure aspects of work culture related to quality:
- Six subscales:
  - improvement orientation
  - patient focus
  - personal influence/performance
  - management style
  - mission and goals orientation
  - team work orientation
  - participants’ attitude toward providing care to dying people
- Each item is scored on a scale of 1 (strongly disagree) to 7 (strongly agree)
Findings of the QiAS

Average for each Dimension

Psychological Empowerment in the Workplace (PEiW) Survey

- PEiW is a 12-item scale that measures direct care workers’ sense of personal empowerment within their workplace.

- Each item is scored on a scale of 1 (strongly disagree) to 7 (strongly agree).

- Four dimensions are measured:
  - meaning
  - competency
  - self-determination
  - impact
Findings of the PEiW Survey

Average for each Dimension

- **Competence**: Pine: 6.75, Birch: 6.62, Maple: 5.9, Elm: 5.63
- **Self-determination**: Pine: 6.72, Birch: 6.61, Maple: 6.72, Elm: 4.78
- **Impact**: Pine: 6.3, Birch: 5.2, Maple: 5.2, Elm: 4.19

- **Pine**: n= 24 out of a possible 44 respondents
- **Birch**: n= 72 out of a possible 102 respondents
- **Maple**: n= 86 out of a possible 124 respondents
- **Elm**: n= 47 out of a possible 53 respondents
Sequential phases of the capacity development model:

3. Creating the PC team

2. Community Catalyst

1. Antecedent community conditions

4. Growing the PC program

Community empowerment

Sufficient health system infrastructure

Vision for change

Collaborative generalist practice
A catalyst for change occurs in the LTC home, disrupting their current approach to care of dying people.
Creating a Cultural Change: A Catalyst

- Catalyst for change – New Long-Term Care Act (2010) offers support for palliative care as it mandates:
  - Palliative care education and orientation for all new staff
  - Ongoing education in for staff on palliative care
  - Must have defined interprofessional pain management, skin and wound care programs
- QPC-LTC Research Project
- PSW Champions for Palliative Care
Creating a Cultural Change: Creating the Team

Interprofessional Care
Provides join together to improve care of the dying and develop “palliative care”.

CREATING THE TEAM
CATALYST
ANTECEDENT CONDITIONS
Creating a Cultural Change: Creating the Team

- Interprofessional Teams develop the palliative care program. They include:
  - Registered Nurses
  - Registered Practical Nurses
  - Personal Support Workers
  - Life Enrichment
  - Housekeeping
  - Dietary
  - Spiritual Care
  - Administration
  - Social Work
The team continues to build, but now extends into the community to deliver palliative care.
Creating a Cultural Change: Growing the Program

- Growing a Palliative Care Program
  - Creating palliative care policies and procedures consistent with the LTC Act
  - Building External Linkages - Hospice Northwest Volunteers, Divinity students providing spiritual support to residents, Pain and Symptom Consultants
  - Education - Snoezelen therapy education and protocol, Dementia awareness raising book chat - *Still Alice*
  - Clinical Care – Palliative Care Simulation Lab, Hospice Palliative Care Unit Visit, Comfort Care Rounds
  - Advocacy – Parliamentary Committee on Palliative and Compassionate Care, National LTC Policy Initiative
Tools for Development

- Information on Advance Care Planning in LTC for families
- Guide for staff to have conversations regarding Advance Care Planning
- Brochure on what it means to receive palliative care in LTC
- Personal Support Worker Competency development
- Understanding culture and diversity at the End of Life
Conclusion

- Palliative Care benefits people with dementia and their families
- Long-Term Care homes have an important role to play at the end of life
- LTC homes and staff need support through education and advocacy to provide quality palliative care
- Families and Residents need every opportunity to talk about the end of life holistically
