

**Communication Tip:**  
**Utilizing a  
Butterfly indicator**

Utilizing a Butterfly Indicator is a method of communicating a resident's death to staff, volunteers, residents, and family members. Consider the following techniques in your home:

-  placing the butterfly on the door of a deceased resident can prepare staff and volunteers prior to entering the room
-  putting a butterfly on the resident's chart can help nursing staff identify who has a palliative or end-of-life care plan
-  palliative care team members can identify themselves by placing a butterfly indicator (ie pin) on their uniform
-  encouraging palliative care team members to have a butterfly beside their name on the shift rotation boards allows for staff, residents, and families to easily identify who is on the palliative care resource team
-  Placing a butterfly at the place setting in the dining room of a resident who has died communicates that resident's death to other residents and families

**Quality Palliative Care in Long Term Care**  
A Community-University Research Alliance

Purpose

A butterfly indicator is a subtle way to alert staff prior to entering a resident's room that a death has occurred. It is an immediate action that can provides notification to staff in the event of a death as not all departments can be informed at the time.
